

ABSTRACT OF THE DISCLOSURE

A seasonally decorative cover for a mailbox has a three dimensional one-piece arched cover body decorated with seasonal symbols and messages and an underside formed with an arcuate recess for snugly receiving the top and opposite sides of the mailbox, so that the cover body can be mounted straddling the mailbox. One version is made of foamed polyurethane and another version is inflatable, having a skin of P.V.C. An anchoring eye for tethering a balloon is formed from the skin material at the top of the body and further anchoring eyes are formed at the bottom of each side for receiving cover securing ties passing under the mailbox.
